> Invents A Roof Framing Table. A roof framing table to aid carpenters to determine the angle of all cuts made in constructing roofs has been perfected by Ira S. Griffith, associate professor of manual arts of the University of Missouri. The table works on the principle of an engineers' slide rule and consists of two celluoid rectangles, sliding on each other, which may be so manipulated that the carpenter knowing the pitch of the roof can determine the angle at which all timbers should be cut.
